

How to add your own device to Wireless_2.4 and the Internet

First off, you will need to log into a School computer and change your password. If you have already done this, then there is no need to do it again, but I do advise you to do it before connecting your device.

Once you know you can connect to a school computer successfully, then proceed with the next part.

Locate Wireless_2.4 with your device and click on it to connect.

When prompted for your details, enter the same as below, but replace **MyLogin** with what you use to log into a school computer with, this will work with any device. And the **Password** will be the same as you use to log into a school computer.

Okay, so when prompted for Login when connecting, type the following green.schools.internal**MyLogin** then for the Password, use your password that you use to log into the School's computers.

Once connected, try using the Internet. If prompted for a login and password, type green**MyLogin** and then type the same **password** you used to connect to the wireless.

If you have problems, check first that your **Login** and **Password** allows you to connect with a School computer. If you can't log into a School computer and you are a Student, ask your Teacher to reset your password and then log into a School computer and change your password, now try connecting device with your new password. If you are teacher and have the same problem, ask your HOLA to reset your password and then log into a School computer, change your password and then try reconnecting again.

Very important notice

Every 6 weeks or less, your password expires and you need to change it.

Once you have changed your password on a School computer, you must then delete your Wireless_2.4 on your device, and reconnect with your new password.

Very, very important

You must fill in the form that states what device you have and it's MAC address. If not, your device will be blocked from our WiFi every Friday and will never connect again until the Form is filled in correctly..

(Mobile phones will be blocked from the school's Wifi, you may connect, but once Friday comes around, it will never connect again)
