

Clearing notifications after the Upgrade

Once logged in, you may receive messages stating that an app failed and was reset.

To prevent these messages from occurring, click on clear all notifications, see the images below on how to do this.

The main reason I received these messages was due to what I changed my defaults to, example, I set Chrome to be my default browser which I will have to do again, my default browser is now Edge, I also set my photos and pictures to open in another viewer, which is now reset back to Windows Photo viewer.
